Líder

Primero cree el repositorio, subí a la rama main el archivo base, después inicie git flow. Una vez iniciado subi lo mismo a la rama develop, posteriormente cree una rama de funcionalidades (Feature) para empezar a codificar. Una vez terminado, termine la funcionalidad se fusionó con la rama main.
Aqui cometi un error modifique el readme y no guarde lo que dio sucesión a unos problemas, con ayuda de gemini me explico mi error y cómo solucionarlo y no cometerlo en el futuro.
Use git stash para guardar el readme no guardado (git stash crea un almacenamiento temporal que guarda los cambios temporalmente antes de agregarlo al repositorio lo que permite salir del bucle de error y realizar cambios) ya que el choque de los archivos sin guardar genero el error, volvi a cambiar a la rama develop. En este punto guarde los cambios y el proceso de merge que quedó incompleto. Posteriormente fusione la rama develop con la release para después eliminar la rama release manualmente y complete correctamente el lanzamiento de las versiones con git push.
